PROFESSIONAL PROFILE

Software and IT Engineer experienced in developing and supporting management information systems, relational databases, digital workflows, data migration, operational reporting, and user training. Works as an IT Engineer contracted through Tokyo Engineering Consultants (TEC) on the JICA-supported Project for Improvement of Water Supply Services in Juba, including information systems for South Sudan Urban Water Corporation (SSUWC). Also serves as Co-founder and Chief Technology Officer of Miles Global Link Co. Ltd. Brings practical experience translating organizational requirements into web and mobile systems, with an interest in applying these skills to monitoring, evaluation, accountability, learning, and consortium reporting.

CORE CAPABILITIES

MIS planning and implementation • Data collection and quality assurance • Database design and migration • Dashboards and reporting • Systems integration • Requirements analysis • Role-based access control • Technical documentation • Staff training and support

PROFESSIONAL EXPERIENCE

IT Engineer (Contractor, Tokyo Engineering Consultants / TEC) | JICA-supported SSUWC Project

Project for Improvement of Water Supply Services in Juba | Juba, South Sudan | 01 Nov 2024 – 01 Nov 2026 (contract end)

- Support implementation and day-to-day use of digital information systems used by SSUWC for billing, customer management, and operations.
- Assist with customer data migration, record validation, identifying incomplete contact details, and improving data quality.
- Support billing, payment tracking, reconciliation, and operational reporting workflows, including dashboards and data exports.
- Support the AquaBill web system and its mobile application for field meter readers, including offline meter-reading capture and synchronization when connectivity is available.
- Provide Microsoft 365 and application training, user support, and knowledge transfer to revenue, finance, ledger, and other departmental staff.
- Coordinate with project stakeholders to identify workflow gaps, document needs, and propose practical system improvements.

Co-founder & Chief Technology Officer | Miles Global Link Co. Ltd.

Juba, South Sudan | Dates to confirm

- Lead technical design and development of organizational and business management software, including database structures, APIs, and web/mobile interfaces.
- Develop solutions supporting finance, inventory, procurement, education management, customer records, and management reporting.
- Implement role-based access controls, administrative dashboards, digital workflows, and system integrations.
- Oversee deployments, hosting configuration, system maintenance, technical documentation, and user support.

Brewing Technician / Brewhouse Process Operator | South Sudan Breweries Limited

South Sudan | 2012 – 2016

- Supported production operations, process monitoring, and accurate operational recordkeeping.
- Applied standard operating procedures, quality controls, and cross-team coordination.

SELECTED PROJECTS

AquaBill | Water Billing and Customer Management System

SSUWC

AquaBill is a web-based water billing and customer management system with a companion mobile application for field meter readers. The mobile app supports offline meter-reading capture and subsequent synchronization when connectivity is restored. The platform supports customer records, data migration and validation, billing, payment tracking, reporting dashboards, and role-based access.

SSUWC Public Website and Headquarters Portal

SSUWC

Contributed to digital content management, administrative workflows, organizational information sharing, and internal system support.
